Highlighting substantial delays in crucial cities, particularly in densely populated and economically influential areas such as the capital city Brasilia, Sao Paulo, and Rio de Janeiro.

12,5 days

Is the total Avg. of delivered orders over the past 2 years.

Data Science Department Magist's Recommendations

- Significant Order Drop: **Orders plummeted by 99% in August 2018.** Understanding the reasons behind this is crucial for market evaluation, as it might reflect shifts in customer preferences or internal operational issues.
- **Tech Product Focus**: Magist's emphasis on tech products aligns with demand, but our data suggests weaker interest in purchasing them.
- Small Business Impact: Small businesses contribute 24% of 15 million Euros, but sales and orders for tech products are declining. This trend needs consideration.
- Delivery Concern: **Customers wait around 12 days for tech product deliveries**. We must review our partnership to enhance customer satisfaction, considering our 2-year data. Excessively long delivery times bear additional risks such as insurance claims.
